

PROFESSIONAL SUMMARY

Final-year ICT Applications Development student with a strong foundation in software development, C#, .NET, Java, SQL, object-oriented programming, and RESTful API development. Experienced in building practical full-stack applications using .NET, Spring Boot, JavaScript, HTML, CSS, and relational databases. Passionate about learning new technologies, writing clean and maintainable code, and solving real-world business problems through software. I have experience with Git, database development, debugging, and developing web-based applications, and I am eager to apply my skills in a professional development environment. Seeking a graduate or junior software developer opportunity where I can contribute to a development team, learn from experienced professionals, and grow into a well-rounded software engineer.

CORE SKILLS

Backend Development: C#, .NET Framework, Java, Spring Boot, RESTful API Design, Spring Data JPA, CRUD Operations, Exception Handling, Object-Oriented Programming

Data & Persistence: SQL Server, MySQL, H2 Database, SQL Query Design, Database Integration, Relational Databases

Frontend Development: HTML5, CSS3, JavaScript, Responsive Design, Figma (UI Prototyping)

Tools & Workflow: Git, GitHub, IntelliJ IDEA, Visual Studio, Postman (API Testing), Agile / SDLC

Software Development: Debugging & Troubleshooting, Problem-Solving, Requirements Analysis, Technical Documentation, Stakeholder Communication

EXPERIENCE

Hirt & Cater – Developer Job Shadowing

July - 2026

C# · SQL · Angular · Typescript · Tailwind · Azure DevOps

- Shadowed the software development team and gained practical insights into a professional software development environment.
- Observed Agile ceremonies, including daily stand ups, sprint plannings, sprint refinements, and collaborative sprint retrospectives.
- Leant how developers use Azure DevOps, Git & GitHub for version control, branching, code reviews, and collaboration as a team.
- Gained exposure to modern technologies, including Typescript, Angular and Tailwind CSS.
- Developed a better understanding architecture, coding standards, debugging, and best practice for building maintainable applications.
- Collaborated with experienced developers asked technical questions and deepened my understanding of software development life cycle in a commercial setting.

PROJECTS

IntelliSafe - Incident & Safety Management System

GitHub

Java · Spring Boot · Spring Data JPA · H2 Database · RESTful APIs · Git

- Problem:** Organisations lack a structured, scalable way to report, track, and resolve safety incidents resulting in fragmented processes and accountability gaps.
- Solution:** Designed and built a full backend system from scratch following a Controller-Service-Repository layered architecture, enabling clean separation of concerns and maintainability.
- Implemented a complete RESTful API suite covering incident creation, status updates, and resolution tracking all with structured exception handling and standardised response models.
- Integrated H2 in-memory database for rapid development iteration and validated all endpoints with Postman, ensuring API reliability before any UI layer.
- Outcome:** Delivered a functioning, well-structured backend system demonstrating production-level API design patterns and real-world software engineering practices.

ZinExpress - Logistics Services Website

[GitHub](#) - [Live link](#)

HTML5 · CSS3 · Responsive Design

- Problem: A logistics business needed a professional web presence to communicate services and build client trust with no existing digital platform.
- Designed and developed a fully responsive, website optimised for cross-device compatibility, applying semantic HTML structure and modular CSS.
- Architected the codebase to support future backend integration (booking forms, route tracking), demonstrating forward-thinking design decision-making.
- Outcome: Live, accessible website that functions as a real client-facing product, demonstrating end-to-end ownership from brief to deployment.

EDUCATION

Walter Sisulu University

2024 – Present

Diploma in ICT- Applications Development

- Relevant modules: Development Software, Technical Programming, Information Systems, Computer Architecture
- Applying academic learning directly to personal projects to accelerate practical skill development

Hibberdene Academy

2023

National Senior Certificate - Bachelor's Pass
