

PROFESSIONAL SUMMARY

Final-year ICT Applications Development student at Walter Sisulu University, with a strong foundation in Java backend engineering and a drive to deliver impact through technology consulting. I design and build real systems not just coursework including a production-ready incident management platform using Spring Boot, RESTful APIs, and layered architecture. I take ownership of problems, iterate quickly, and communicate clearly. I am actively seeking a graduate programme where I can apply analytical thinking and engineering skills to solve real client challenges from day one.

CORE SKILLS

Backend Development: Java (OOP), Spring Boot, RESTful API Design, Spring Data JPA, CRUD Operations, Exception Handling

Data & Persistence: MySQL, H2 Database, SQL Query Design, Database Integration

Frontend & Design: HTML5, CSS3, JavaScript, Figma (UI Prototyping), Responsive Design

Tooling & Workflow: Git & GitHub, IntelliJ IDEA, Postman (API Testing), Agile / SDLC

Consulting Mindset: Analytical Problem-Solving, Client Communication, Stakeholder Requirements, Technical Documentation

PROJECTS

IntelliSafe - Incident & Safety Management System

[GitHub](#)

Java · Spring Boot · Spring Data JPA · H2 Database · RESTful APIs · Git

- Problem: Organisations lack a structured, scalable way to report, track, and resolve safety incidents resulting in fragmented processes and accountability gaps.
- Solution: Designed and built a full backend system from scratch following a Controller-Service-Repository layered architecture, enabling clean separation of concerns and maintainability.
- Implemented a complete RESTful API suite covering incident creation, status updates, and resolution tracking all with structured exception handling and standardised response models.
- Integrated H2 in-memory database for rapid development iteration and validated all endpoints with Postman, ensuring API reliability before any UI layer.
- Outcome: Delivered a functioning, well-structured backend system demonstrating production-level API design patterns and real-world software engineering practices.

ZinExpress - Logistics Services Website

[GitHub](#) - [Live link](#)

HTML5 · CSS3 · Responsive Design

- Problem: A logistics business needed a professional web presence to communicate services and build client trust with no existing digital platform.
- Designed and developed a fully responsive, website optimised for cross-device compatibility, applying semantic HTML structure and modular CSS.
- Architected the codebase to support future backend integration (booking forms, route tracking), demonstrating forward-thinking design decision-making.
- Outcome: Live, accessible website that functions as a real client-facing product, demonstrating end-to-end ownership from brief to deployment.

EDUCATION

Walter Sisulu University

2024 – Present

Diploma in ICT- Applications Development

- Relevant modules: Technical Programming (Java), Information Systems, Computer Architecture, Systems Analysis & Design
- Applying academic learning directly to personal projects to accelerate practical skill development

Hibberdene Academy

2021 – 2023

National Senior Certificate - Bachelor's Pass
